**Title:** Decision Support Tools for Stockpile Analysis (Unclassified summary)

**Author(s):** Kern, Kristen Tulloch  
Dale, Crystal Buchanan

**Intended for:** Engineering Capability Review May 24 2022

**Issued:** 2022-05-04

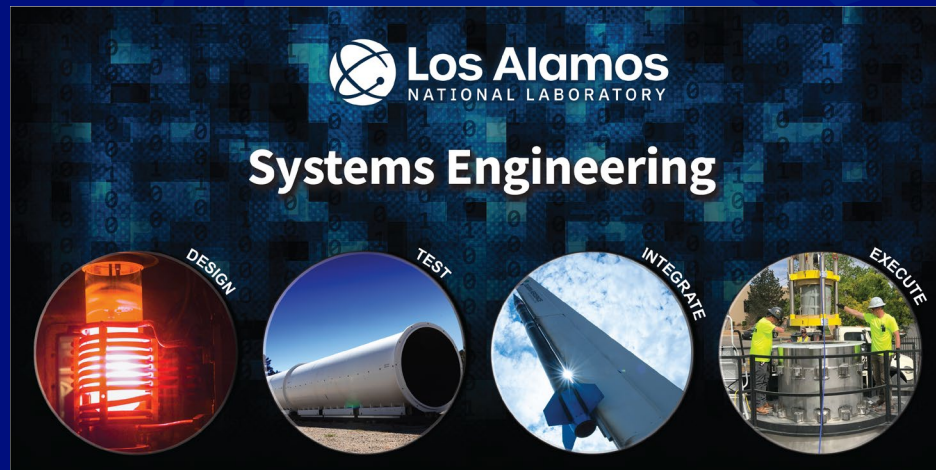

Los Alamos National Laboratory, an affirmative action/equal opportunity employer, is operated by Triad National Security, LLC for the National Nuclear Security Administration of U.S. Department of Energy under contract 89233218CNA000001. By approving this article, the publisher recognizes that the U.S. Government retains nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or to allow others to do so, for U.S. Government purposes. Los Alamos National Laboratory requests that the publisher identify this article as work performed under the auspices of the U.S. Department of Energy. Los Alamos National Laboratory strongly supports academic freedom and a researcher's right to publish; as an institution, however, the Laboratory does not endorse the viewpoint of a publication or guarantee its technical correctness.

# Decision Support Tools for Stockpile Analysis

(unclassified summary)

Crystal Dale and Kris Kern,  
Systems Design & Analysis; NEN-5

May 24, 2022

# Supporting Executive-Level Stockpile Planning and Decision Making

- The annual stockpile and weapons complex planning process is a highly **interdependent**, complex system of analyses and decisions that involve multiple sites and stakeholders.
  - Decisions are often made with incomplete or anecdotal information.
- Our **executive-level** decision support tools are designed to inform senior leadership at LANL and across the Weapons Complex.
  - **Portable** (excel based), rapidly modifiable to accommodate changing situations.
  - Easily understood, with clear success/failure metrics.
  - **Rapid**, flexible scenario generation to meet the needs of a broad range of stakeholders.
- Our tools are requirements-based and verified by peers at LANL, LLNL, production agencies, and NNSA.
  - Stockpile program of record from the Planning and Program Directive (P&PD).
  - Supply calculations reflect the latest production estimates, including infrastructure investment timing and resulting capacity.

Challenge: Translating complexity, simply, without loss of integrity.

# Impacting Ongoing Programs and Building Relationships

- Impacting Ongoing Programs

- The tritium supply and demand model has been briefed to NA-10 and was used to support the 2018 JASON review of the tritium program. As a result, program plans were modified to ensure future tritium supply is sufficient to meet stockpile needs.
- Requirements Planning Document (RPD) Assessment: Our team has supported joint NNSA and USSTRATCOM engagement for future stockpile planning. LANL tools influenced decisions for future stockpile modernization.
- Through engagement with USSTRATCOM, the pit planning model was used to inform the 2022 Nuclear Posture Review.
- The pit model has been modified to include production capacity estimates based on an ongoing Design for Manufacture (DFM) LDRD.

- Building Relationships Across the Nuclear Weapons Complex

- Our tools have been used to enhance collaboration and common understanding between the **two physics design labs** through demonstration at quarterly LANL/LLNL senior leadership meetings.
- The radiation case production planning tool has been recognized by LANL and NNSA leadership for its role in promoting a common understanding of case production with LANL, LLNL, and Y12.
- The RPD Explorer and P&PD Explorer have been shared with DoD and NNSA.
